

Владимир Юрьевич Поляков

(11 ноября 1938 - 14 февраля 2015)

Так получилось, что электронные микроскописты первыми начали осваивать корпус «А». Среди них был верный ученик Ю.С. Ченцова Володя Поляков, будущий выдающийся морфолог клеточного ядра и заведующий отделом электронной микроскопии Института Белозерского. Вес в науке он набирал постепенно, отличаясь весьма не тривиальными взглядами на то, как функционирует клетка и ее ядро (не все из них оказались реализованными). Он опубликовал множество статей по фундаментальной цитологии. Но в конце жизни решил, что пора приносить реальную пользу людям, и занялся проблемами онкологии, воспроизводства, зрения, сосудов и др. В начале 1970-х годов В.Ю. открыл для себя Белое море и сделался его фанатом. Множество его друзей из Института полюбили эти фантастически красивые края благодаря Владимиру Юрьевичу. А еще В.Ю. Поляков был прекрасным художником. Он был веселым, остроумным, неунывающим человеком. В Институте его любили. Смерть настигла его мгновенно, и это был большим потрясением для всего Института.
